Dear all - you will need to set up groups on sakai for each of the lab groups in your section. This is necessary because in my class, we are using sakai to record grades, and, we will report 1 grade per lab group on sakai, and it will automatically assign that grade to both lab members. In addition, this will provide a single dropbox location for each group to store their lab notes and observations during lab on sakai (i.e. an electronic lab notebook) that they can then use for writing their writeups, as well as providing the grader access to their raw data. If possible, please do this as they get started in lab today so they can get comfortable with the approach.

The instructions for creating the groups follow:

- 1) go to 'site info'
- 2) go to 'manage groups'
- 3) go to 'create new groups'
- 4) give the group the title that is their last names i.e.: nightingale_eldridge (I made this group on my site to test things out)

and you should be good to go. They should then be able to access their group dropbox site for taking notes in lab, and for submitting writeups. We will then select 'only group submissions' when we enter the lab writeup into sakai for grading purposes.

Please let me know if you have issues/questions.

Good luck in lab today and tomorrow!
